Authorization for this examiner's amendment was given in a telephone interview with Brian Decker on July 16, 2009.

The application has been amended as follows:

34. (Currently amended) A method, ~~comprising executing computer-executable instructions by one or more processors for:~~

receiving bill information from a biller;

transforming, by an electronic bill presentment computing system comprising one or more server computers, the received bill information into normalized bill information, wherein the normalized bill information is stored for subsequent processing, and wherein the electronic bill presentment computing system is at a location remote from both a customer associated with the received bill information and the biller;

processing, by the electronic bill presentment computing system, the received bill information to generate bill summary information; wherein processing the received bill information occurs at a location remote from both a customer associated with the bill information and the biller;

processing, by the electronic bill presentment computing system, the normalized bill information to generate bill detail information, ~~wherein processing the normalized bill information occurs at a location remote from both the customer and the biller;~~ and

transmitting at least one of the bill summary information or the bill detail information for display;

wherein the bill summary information represents a subset of the bill detail information.

37. (Currently amended) The method of claim 34, further comprising ~~wherein executing the computer-executable instructions by one or more processors further comprises executing the computer-executable instructions for:~~

storing at least one of the received bill information, the bill summary information, or the bill detail information.

39. (Currently amended) The method of claim 34, further comprising ~~wherein executing the computer-executable instructions by one or more processors further comprises executing the computer-executable instructions for:~~

receiving a request, via a network, for a bill on behalf of the customer,

wherein at least one of (i) the processing the received bill information, (ii) the processing the normalized bill information, and (iii) the transmitting at least one of the

bill summary information or the bill detail information is performed responsive to the request.

44. (Currently amended) A system, comprising:

a ~~communications port~~ network interface configured to receive and transmit bill related information;

a memory configured to store bill related information; and

a processor in communication with the ~~communications port~~ network interface and the memory and operative to execute instructions to 1) receive bill information from a biller, 2) transform the received bill information into normalized bill information, wherein the normalized bill information is stored in the memory for subsequent processing, 3) process the received bill information to generate bill summary information, 4) process the normalized bill information to generate bill detail information, 5) transmit at least one of the bill summary information or the bill detail information for display;

wherein the processor is located at a location remote from both a customer associated with the bill data and the biller; and

wherein the bill summary information represents a subset of the bill detail information.

46. (Currently amended) The system of claim 44, wherein the processor is further operative to execute instructions to process the normalized bill information by merge merging the normalized bill information with a template to generate the bill detail information.

47. (Currently amended) The system of claim 44, wherein the processor is further operative to execute instructions to store at least one of the received bill information, the bill summary information, or the bill detail information in the memory, wherein storing is performed after receipt of the bill information or after generation of the bill summary information or the bill detail information.

49. (Currently amended) The system of claim 44, wherein the processor is further operative to execute instructions to receive a request, via a network and from the ~~communications port~~ network interface, for a bill on behalf of the customer, wherein at least one of (i) the processing the received bill information, (ii) the processing the normalized bill information, and (iii) the transmitting at least one of the bill summary information or the bill detail information is performed responsive to the request.

76. (Currently amended) The system of claim 44, wherein the processor is further operative to execute instructions to transmit at least one of the bill summary information

or the bill detail information by ~~transmit~~ transmitting the bill summary information and the bill detail information.

79. (Currently amended) The method of claim 34, further comprising wherein  
~~executing the computer-executable instructions by one or more processors further~~  
~~comprises executing the computer-executable instructions for:~~

- receiving a first request for the bill summary information; and
- receiving a second request for the bill detail information.

81. (Currently amended) The system of claim 44, wherein, prior to at least transmitting  
at least one of the bill summary or the bill detail information for display, the processor is  
further operative to execute instructions to:

- receive a first request, via a network and from the ~~communications-port~~ network  
interface, for the bill summary information; and
- receive a second request, via the network and from the ~~communications-port~~  
network interface, for the bill detail information.

82. (Currently amended) The system of claim 81, wherein the processor is further  
operative to execute instructions to transmit at least one of the bill summary or the bill

~~detail information for display by transmit~~ transmitting the bill summary information responsive to receiving the first request, and ~~wherein the processor is further operative to execute instructions to transmit~~ transmitting the bill detail information responsive to receiving the second request.

84. (Currently amended) The method of claim 34, ~~further comprising wherein executing the computer executable instructions by one or more processors further comprises executing the computer executable instructions for~~ transmitting a bill notification associated with the received bill information to the customer prior to transmitting at least one of the bill summary information or the bill detail information.

85. (Currently amended) The system of claim 44, wherein the processor is ~~further~~ operative to execute instructions to transmit at least one of the bill summary or the bill detail information for display by transmit transmitting at least one of the bill summary information or the bill detail information to the customer.

88. (Currently amended) The system of claim 44, wherein, when transmitting at least one of the bill summary or the bill detail information for display, the processor is ~~further~~ operative to execute instructions to:

receive a first request for the bill summary information;

transmit the bill summary information responsive to the first request;

subsequent to transmitting the bill summary information, receive a second request for the bill detail information; and

transmit the bill detail information responsive to the second request;

wherein the normalized bill information is processed to generate the bill detail information subsequent to receiving the first request.

89. (new) The system of claim 44, wherein the processor is operative to execute instructions to transmit at least one of the bill summary information or the bill detail information for display by transmitting at least one of the bill summary information or the bill detail information for display in a webpage over the Internet.

90. (new) The system of claim 76, wherein the processor is operative to execute instructions to transmit at least one of the bill summary information or the bill detail information by: transmitting the bill summary information and the bill detail information together or transmitting the bill summary information and the bill detail information separately.
